EDUCATION

University of Washington

Seattle, WA

BS, Computer Science (Dean's List)

Sep. 2022 – Jun. 2026 (expected)

EXPERIENCE

Search Infrastructure Co-op

Seattle, WA

Fathomline Systems

May 2025 – May 2026

- Query latency in the autocomplete service spiked under load; adding a tiered LRU cache cut p99 latency from **420ms to 85ms**
- Built a **Rust-based indexing pipeline** that reprocesses 30M documents nightly, replacing an **11-hour** full rebuild with a **2-hour** incremental one
- Wrote a relevance-scoring harness that A/B tests ranking changes against 20 query sets before rollout
- Traced a tokenizer bug that was silently dropping accented terms, recovering recall on roughly **5%** of queries
- Added query-shape validation to the ingestion API so malformed filters get rejected before hitting the index

Mobile App Lead

Seattle, WA

Cascade Housing Cooperative

Sep. 2024 – Jun. 2026

- Rebuilt the co-op's iOS/Android app in **React Native**, cutting cold-start time from **3.8s to 1.0s**
- Added offline sync with conflict resolution, cutting failed submissions during outages by roughly **85%**
- Shipped push notifications for maintenance updates, lifting resident response rate from **57% to 88%**
- Led **3** fellow student developers to ship a resident directory covering **950+** tenants, now averaging **4.6 stars** across app stores

Security Contributor

Seattle, WA

Husky Security Collective

Jan. 2024 – Jun. 2025

- Ran a dependency audit across the co-op's stack, finding and patching **7** vulnerable packages before a disclosed CVE went public
- Added rate limiting and CSRF protection to the resident portal, closing **2** exploitable auth-bypass paths
- Wrote a secrets-scanning pre-commit hook that's blocked **25+** accidental credential leaks since rollout

PROJECTS

Puzzle Solver Toolkit

Feb. 2026 – present

Python, NumPy | github.com/janedoe/puzzle-solver

- Simulated annealing and A* search sit behind a shared heuristic interface for solving sliding-tile and Sokoban puzzles
- Benchmarked **5 heuristics** across 150 generated puzzles to compare solve time against optimality
- Distributing search across worker processes cut median solve time roughly **3x**

Textbook Swap Marketplace

Sep. 2024 – Dec. 2024

React, TypeScript, Tailwind CSS, Firebase | textbookswap.app

- Peer-to-peer listings platform for textbook exchange, now used by **600+** students
- Infinite scroll and image lazy-loading brought listing load time from **12s to 0.7s**
- An automatic matching system surfaces mutual-swap opportunities instead of requiring manual browsing

SKILLS

Languages & Frameworks : Python, JavaScript, TypeScript, Java, SQL, React, Node.js

Tools : Docker, Git, CI/CD, PostgreSQL, Linux, AWS, Bash
